

Valente Vignettes: Bad Introductions, Billy Joel, and Baseball

Published July 3rd, 2018

Gustav Mueller

It was November of 1983, an ASHA convention at the Netherland Plaza Hotel in downtown Cincinnati. I was the moderator for a session of podium papers on earmold acoustics—horn tubing was big at the time. I knew of this guy from Missouri, one of the presenters, who had published a little on the topic; I was pretty sure his name was Valentine. When I introduced myself to Dr. Valentine prior to the session, he quickly informed me it was Valente, not Valentine—stated in a way that suggested to me that I was not the first to call him Valentine. As I later walked by him, to assume my position at a table on the stage, he leaned forward and again said “Valente, Valente.” I nodded in agreement. Mike was the third speaker that I introduced, and ... you guessed it ... I called him “Valentine.”

Somehow, he forgave me for that blunder and over the past 35 years we have worked together on research projects, articles, book chapters, journal editing and various committees. Our most extensive time together was in the early 1990s, when he and I were part of the merry band of 12 audiologists comprising the “IHAF Group.” Over a two-year span, our group had several meetings, some lasting for days, and indeed a final (now forgotten) hearing aid fitting protocol did emerge.

If I had to use one word to describe the extensive audiologic contributions of Mike Valente over the past several decades the word would be “relevant.” Whether it’s a workshop lecture, a research article, a book chapter, or an entire book, you can always count on the fact that what you get from Mike relates to practical issues in the fitting of hearing aids, maybe even something that can be implemented Monday morning. You’ll never read a Mike Valente article, and at the end say “Hmm, interesting, but who really cares?” Mike researches and writes about things that we do care about. It is no coincidence that he has been selected to contribute to most every hearing aid Best Practice statement, as few others have the insight to all the critical factors related to the fitting process. And perhaps most importantly, his practical “do-it-the-right-way” philosophy has been passed on to the hundreds of students he has mentored.

The Billy Joel Connection

Some of you readers know that Mike was a classmate of singer/songwriter Billy Joel at Hicksville High School in Long Island, NY. While not well documented, there are rumours that during study hall, Billy and Mike worked on song themes and lyrics together. History tells us that Billy’s story line and lyrics prevailed, but I thought that this might be the time to bring forth Mike’s version of some of the songs that became popular. Until now, most of these lyrics and story lines only had been known to exist on well-stained bar napkins.

We Didn’t Start the Fire

Billy Joel Version: Includes brief, rapid-fire allusions to more than 100 headline events occurring

over a 40-year period. The song is not intended to sound preachy, but rather illustrate what we have inherited, and what we need to fix.

Valente Version: Includes detailed description of more than 100 critical issues related to the fitting of hearing aids based on research over a 40-year period. The song is not intended to sound preachy, but rather illustrate what we have inherited, and what we need to fix.

Piano Man

Billy Joel Version: A barroom piano player comments on his observations of the regular customers sitting around his piano bar on a Saturday night and wonders if they all are “sharing a drink they call loneliness.”

Valente Version: An audiologist comments on his observations regarding compliance with Best Practice Guidelines when hearing aids are being fitted, and wonders if many are “sharing a drink they call indifference.”

Uptown Girl

Billy Joel Version: A working class man attempts to woo an uptown girl. The downtown man presents a convincing story regarding why he should be the one, and he concludes: “And when she's talking, she'll say, that she's mine-ya-yine.”

Valente Version: A new male AuD grad attempts to convince his female audiologist supervisor to conduct probe-mic verification. He presents a convincing story regarding why prescriptive verification is necessary, including the findings of a Valente double-blinded RCT study. One day he observes her conducting speechmapping, and he concludes: “And when she’s testing, she’s looking, fine-ya-yine.”

Scenes from an Italian Restaurant

Billy Joel Version: A bottle of white, a bottle of red, perhaps a bottle of rosé instead. A story told at a table near the street at a neighbourhood Italian restaurant. About Brenda and Eddie, people who peaked too soon, didn’t make much of their lives, married each other, but then soon divorced.

Valente Version: A bottle of white, a bottle of red, perhaps a bottle of rosé instead. A story told at a table near the street at a neighbourhood Italian restaurant. About Mike and Maureen, people who have yet to reach their peak, have accomplished amazing things, and just celebrated their 42nd wedding anniversary!

My Fondest Day with Mike

I've spent several fun days with Mike, most of them focused on audiology-related issues. However, we do share one avocation other than audiology—a passion for following major league baseball. So, I must say, my *most* enjoyable day ever with Mike was June 7, 2009. I'm a huge Colorado Rockies fan and Mike is equally fond of his Cardinals. The Rockies were playing the Cardinals in St Louis, and my wife Karen and I decided to go take in the four-game series. The Rockies had won the first three, and on Sunday the 7th, we had brunch with Mike and his wife Maureen before the game. A bad move I thought, as surely this mingling would cause some bad karma to flow the Rockies way. But we won! A four-game series sweep against the home team, especially the Cardinals, is a very rare baseball event—I still think of Mike and smile when I see that post-game picture I have of me waving my broom in front of the Stan Musial statue.

But actually, it's easy to smile when you think of Mike, as he not only is a great clinician, mentor, author and researcher, but he is genuinely a good guy. I know that some view retirement as a time for reinvention, another chance to do new things and be a new version of themselves. I sort of like Mike Valentine just the way he is, and will be, very disappointed if we don't continue to read and hear his audiologic insights for many years in the future.
